SOFTWARE

Engine
Unreal Engine 5 — Sequencer, Niagara, MetaHuman, Control Rig, Cine Cameras, Level Design

DCC
Maya, Blender, ZBrush

Comp / Edit
After Effects, Premiere Pro

2D
Photoshop

Pipeline
Git, SourceTree, Perforce

CORE SKILLS

- Cinematic lighting & camera blocking
- Sequencer-based previz & editorial
- Mocap cleanup & keyframe polish
- Shot composition & storytelling
- Real-time rendering pipelines

EDUCATION

B.Sc — Game Art & Design
ICAT Design and Media College
2023 — 2027

AWARDS

- Runner-Up — College Game Jam (2×)
- Finalist — Best Game Award 2027

LANGUAGES

English — Fluent
Hindi — Fluent
Telugu — Fluent
Kannada — Fluent

EXPERIENCE

Cinematics Intern *Example Game Studio | Jun 2025 — Aug 2025*

- Captured a series of high-fidelity cinematic photoshoots in Unreal Engine 5, using Cine Camera Actors to compose environment and character stills for marketing and portfolio use.
- Directed lighting, framing, and post-process setups (color grading, depth of field, exposure) to give each still a filmic, photorealistic look.
- Dressed and staged scenes for still compositions, balancing set design, prop placement, and camera angle to tell a story in a single frame.
- Delivered a consistent visual style across an entire shot series, presenting final renders to the art director and iterating on feedback.
- Actively upskilling in industry-standard cinematic tools — Sequencer camera work and MetaHuman performance — to move from stills into full motion cinematics.

Junior Technical Artist (Freelance) *Independent Projects | Jan 2024 — May 2025*

- Developed reusable Blueprint-driven camera and sequencer tools to speed up cinematic previz for small teams.
- Created lookdev and lighting passes for three short real-time cinematics showcased at student festivals.

FEATURED PROJECTS

“BTS” — Bengaluru Traffic Simulator *Game Jam Project | Theme: Reverse | Concept Lead*

- Pitched and led the core concept: reversed driving controls, a 5-second rewind-on-collision, and a “lift the car” escape mechanic in place of driving through traffic.
- Extended the reverse theme into the world itself with a day cycle running backward from night to morning.
- Directed the creative vision while the build was implemented in Unity; the concept's originality was praised by players and judges.

“Tiny Theft” — Personal Project (In Progress) *Concept Lead, Artist, Unreal TA*

- Designing a heist game where players shrink to 1:64 scale and drive miniature versions of their dream cars.
- Core concept: since players can't afford the real model cars, they must steal the miniatures from stores using stealth and hiding — leaning into the risk of being spotted while tiny.
- Owning concept design, art direction, and Unreal Engine technical setup for the project end-to-end.

EDUCATION

Bachelor of Science — Game Art & Design *ICAT Design and Media College | 2023 — 2027*

Relevant coursework: Real-Time Rendering, 3D Animation Principles, Cinematography for Games, Technical Art Pipelines.
